

Guideline Department

Risk Assessment for Model of Pregnancy Care Women's Health

Target Audience

Midwives, Shared Maternity Care General Practitioner, Obstetric Residents and Registrars, Obstetric Consultants

Purpose

This is intended to guide decision making and assessment at midwifery booking and at subsequent antenatal visits for inclusion in a model of care and to guide referral within and between models of antenatal care. It will assist in providing evidence based, safe and collaborative care

Guideline

The risk assessment for the appropriate model of care is undertaken by the midwife at the booking visit. If women have <u>no</u> risk factors, they are suitable for Group A care (see below). If there is any doubt about the relevant of risk factors, an appointment is to be made for the obstetric registrar or consultant to determine the appropriate model of care.

Use the table 'Indications for Discussion, Consultation and Referral' located on page three of this document to decide the most appropriate model of antenatal care These indications are presented in two sections

- Indications at commencement of care, divided into past or current medical history, preexisting gynaecological disorders and obstetric history
- Conditions developed or discovered during pregnancy
- Previous or existing conditions are divided into groups A, A+, B or C

Discuss with women which group their condition or history falls into and the recommended model of care.

Note: it is not the women who are in the group but their condition or history. Care plans may be customised according to the individual circumstances of the woman and their family.

Group A: Women with well pregnancy suitable for Midwife, GP shared care or VMO care. Women are to have an obstetric planning visit with an obstetric registrar or specialist to confirm **Group A+:** Women with a low risk condition, or previous history that requires an obstetric planning visit, and a review to be conducted at the end of the pregnancy, who would otherwise be considered low risk for duration of the antenatal period.

Group B: Following the obstetric planning visit, a plan of care is to be made and documented. By default, women are offered a mix of appointments with the obstetric registrar/specialist and some with other care providers (see appendix for guide). Any variation from the default template is to be documented and implemented in liaison with the clinic midwifery and admin team.

Group C: Antenatal care to be continued by obstetric doctors at the hospital or by an accredited VMO in accordance with plan documented by an obstetric specialist.

Obstetric Planning Visit

This visit should be arranged for all women and is usually conducted at 14-16/40. If there is uncertainty about the significance of a condition at any point in the pregnancy, a referral should be made for an obstetric assessment. The referral can be made by a GP or midwife and the woman should be seen by the hospital obstetric registrar, consultant or obstetric VMO.

Guideline Department

Risk Assessment for Model of Pregnancy Care Women's Health

GP Health Check

Women who are having telehealth appointments for their booking and obstetric planning visit should see their GP, if they have not already done so, for a health check. The purpose of this is to ensure that women have a medical review and examination to exclude any obvious morbidity. The health check should comprise:

- Review of any medical history if not already done
- General health and wellbeing
- Confirm estimated date of birth (EDB)
- Provide smoking cessation and substance use advice if applicable

Systemic examination to include (if not already done at first visit):

- Pulse rate, blood pressure
- Body mass index
- Cardiovascular (exclude murmurs, signs of
- Respiratory examination (exclude murmurs, respiratory conditions)
- Breast examination only if indicated from symptoms
- Thyroid examination
- Abdominal examination (exclude masses)
- Speculum examination only if indicated from symptoms with HVS, chlamydia if indicated. Investigations (if not already done at first visit)
- Cervical screening test if indicated (opportunistic screening)
- Urine for MSU and urine dipstick for protein
- Urine for chlamydia screening if <25yrs or past history of chlamydia

It should be noted that this visit is not to allocate a level of risk or a model of care. Allocation of the model of care is conducted at the booking visit and in conjunction with the obstetric planning visit. If the GP identifies any issues that may alter the allocation of risk category, they should refer the woman back to the antenatal clinic for a clear plan of care to be made.

MODELS OF CARE

Midwifery care: Antenatal care is provided by hospital midwives while pregnancy remains normal and there are no group B or C conditions.

GP shared care: Antenatal care is provided by a GP who is accredited for the Peninsula Health shared maternity care program. Appointments for hospital obstetric clinic care are required at 36 weeks and at 41 weeks gestation. Women whose pregnancy is in group A and A+ are suitable for GP shared care. Women who have group B conditions may be suitable for GP shared care after an assessment and plan is made with hospital obstetric team. This plan will be recorded in BOS, printed and placed in VMR (Victorian Maternity Record), or written in the VMR. If a GP identifies risks in the pregnancy or abnormal investigations that place women is a different category of risk, the woman is to be referred to the antenatal clinic for an obstetric review to update a care plan.

GuidelineRisk Assessment for Model of Pregnancy CareDepartmentWomen's Health

Collaborative Maternity Care: Shared antenatal care with midwives and hospital obstetric staff care for women in category A+ or B.

Hospital obstetric care: Antenatal care is provided by hospital obstetric registrar and/or consultant

Private obstetrician (visiting medical officer - VMO): Antenatal care is provided by an accredited private obstetrician or Visiting Medical Officer (VMO) with labour and postnatal care provided by Frankston Hospital

Complex Pregnancy Clinic: Provided by the high risk CPC team in select cases within Group C – See referral guidelines for the CPC. Once assessed in the CPC, further care and follow up may be reallocated to other models of care such as Group B or C.

Enhanced Maternity Care (EMC) Specialist clinic for women with complex mental health, substance use, intellectual disability or are under the age of 21 years. with mental health. This is a multidisciplinary service.

Koori Maternity Service: Specialist midwifery service for families who identify as Aboriginal or Torres Strait Islander. These women may be category A for exclusively Koori midwife care, A+, B or C and have Koori midwifery support while having obstetric led care.

Key Aligned Documents

Triaging Maternity Booking Referrals Routine Pregnancy care Abdominal examination/palpation obstetrics and gynaecology Advanced maternal age Cholestasis of pregnancy Diabetes in pregnancy Hypertension in pregnancy Iron deficiency anaemia in pregnancy, intrapartum and postpartum Management of placenta praevia, placenta accrete and vasa praevia Management of the small for gestational age or growth restricted fetus Perinatal mental health Prenatal Screening Tests Reduced fetal movement Twin pregnancy

Evaluation

Evaluation is through the reporting of events with the VHIMS system, in depth case reviews and audit through Women's Health morbidity and mortality meetings

Women's Health **Risk Assessment for Model of Care** Summary of Risk Groups Suitable for Low Risk Care

Group A: Low Risk	
No clinical risks	Obstetric conditions:
Rhesus negative (antibody negative) for anti D	
Minor medical conditions managed by GP including:	Uncomplicated instrumental birth (unless req debrief)
Mild asthma	Diastasis of rectus muscles (with physio)
Controlled anxiety/depression	Mild pelvic instability (with physio)
Irritable bowel syndrome	Common symptoms of pregnancy (nausea, constipation,
Parasitic infection	GORD, haemorrhoids, constipation) controlled under care
Single LETZ procedure	of GP
Group A+: Low Antenatal Risk, Perinatal Plan Requir	ed
History of genital herpes	Obstetric history of:
Low (minor) placenta at 20/40, no history of APH	Caesarean section with no other risk factors
Scoliosis with no compromised function	Shoulder dystocia
Pelvic trauma or deformities no compromised function	Macrosomia (birthweight >4.5kg)
Diet controlled GDM (refer if macrosomia or insulin	РРН
required)	Third or fourth degree tear, no ongoing dysfunction
Maternal age 35-39yrs, multiparous	Manual removal of placenta
	Neonatal GBS infection

Obstetric Indications

Group B: Medium Risk			
Adoption / Surrogacy	Postpartum depression (B or C and SMC where		
Abdominal pain	appropriate)		
Abnormal cord insertion (marginal or velamentous)	Preeclampsia or gest hypertension (previous preg)		
Congenital and/or hereditary disorder of a previous child	Preterm birth before 37 weeks' gestation		
(consider FDU/CPC)	Suspected FGR (deviation from expected growth		
Forceps or vacuum assisted birth who wishes debrief	trajectory)		
FGR (previous) birth weight between 5 th and 10 th centile	Termination of pregnancy > 3		
FGR level 2 risk factors	Threatened preterm labour		
Grand multiparity parity greater or equal to 5	Third or fourth degree perineal tear – ongoing symptoms		
Macrosomia birthweight above 4.5kg	Trophoblastic disease hydatidiform mole or vesicular mole		
Manual removal of placenta	in past 12 months		
Mid-trimester fetal loss	Pelvic floor dysfunction (B or C)		
Neonatal hypoxic injury or Apgar below 7 at 5 minutes	Previous mid trimester pregnancy loss (B or C)		
Placental abruption	Reduced fetal movements (first pres ⁿ with normal CTG)		
Placenta praevia (major at 20/40 but minor at 32/40)			
Group C: Higher Risk			
Breech or malpresentation at 36/40	Perinatal death (B or C where appropriate)		
Classical or T-incision caesarean	Pre-eclampsia or gest hypertension (current pregnancy)		
Cervical weakness, length shorter than 25mm, Cx suture	Past eclampsia, severe preeclampsia or HELLP		
Cervical laceration	Placenta praevia (major after 32/40 or with APH)		
Cholestasis (BA<40umol/L)	Polyhydramnios >25cm but <30cm		
FGR (previous) birth weight below 5th % using Dobbins	Oligohydramnios in 3 rd trimester		
FGR (current) EFW >3 rd but <10 th % on	Preterm ruptured membranes from 32/40		
FGR risk Level 3	Reduced fetal movements (recurrent)		
Hypertension	Twins (DCDA uncomplicated)		
Group CPC: Complex Pregnancy Clinic			
Cholestasis BA>40umol/L	Oligohydramnios in 2 nd trimester		
Fetal anomaly	Polyhydramnios >30cm		
FGR EFW <5 th % in 2 nd trimester	Placenta accreta (past or suspected)		
FGR EFW <3 rd % in 3 rd trimester	Preterm ruptured membranes (2 nd trimester)		
FGR with UA or CPR>95 th %, AREDF	Twins (MCDA, DCDA with FGR, abnormal AFI/Dopplers)		
Hypertension - unstable	Vasa praevia

Women's Health Risk Assessment for Model of Care Summary of Risk Groups

Medical Indications

Group B: Medium Risk	
Age: Under 16yrs (+YWC), over 35yrs in primip, over	MSk: Developmental skeletal disorders, osteogenesis
40yrs in multip.	imperfecta, Scheuermann's disease, scoliosis,
AOD: Alcohol and other drug use (Also SMC)	spondylolisthesis (C if compromised function)
Anaes: Previous anaesthetic complications. Malignant	Neuro: Epilepsy without medication and no seizure in the
hyperthermia	past 12 months, stable multiple sclerosis
BMI: <18 or from <u>></u> 35 to <40	Pharm: Prescription medication in category 3, 4 and X
Card: Heart murmurs or palpitations	Psy: Moderate/severe depression (EPDS above 12 or
Derm: Skin condition requiring systemic therapy	positive response re self-harm), psychiatric condition
Endo: Subclinical thyroid disease	requiring medication, consider Perinatal Mental Health
GI: Hepatitis B or C (stable LFTs)	Resp: Moderate asthma (oral steroids in past year and
Bariatric surgery – weight stable >1yr	maintenance therapy)
Haem: Hereditary spherocytosis, iron deficiency anaemia	Lung function disorder (incl Resp consultation)
Women declining blood products. MTFHR mutation	Renal: Recurrent UTI, haematuria, proteinuria
heterozygous	Rheum: Inactive auto immune disease on no medication
ID: Chlamydia or gonorrhoea in this pregnancy,	
listeriosis, trichomoniasis, other infection for advice/plan.	
Previously treated syphilis	
Group C: Higher Risk	
Age: >40 yrs with comorbidities	Haem: Hx of thromboembolic disease (not on
BMI: ≥40 kg/m ²	anticoagulation), thrombocytopaenia (Pl <150 x10 ⁹),
Card: Hypertension - controlled	thalassaemia minor – partner negative.
Endo: GDM requiring insulin or causing	Psy: Hx of puerperal psychosis, eating disorder
	Resp: Inituenza in this pregnancy
macrosomia/polyhydramnios	Resp: Influenza in this pregnancy
GI: Inflammatory bowel disease (Crohn's or UC)	Social: Current or previous child protection(SMC)
GI: Inflammatory bowel disease (Crohn's or UC) Obstetric cholestasis (BS<40umol/L)	
GI: Inflammatory bowel disease (Crohn's or UC) Obstetric cholestasis (BS<40umol/L) Group CPC: Complex Pregnancy Clinic	Social: Current or previous child protection(SMC) poor attender, family violence
GI: Inflammatory bowel disease (Crohn's or UC) Obstetric cholestasis (BS<40umol/L)	Social: Current or previous child protection(SMC)
GI: Inflammatory bowel disease (Crohn's or UC) Obstetric cholestasis (BS<40umol/L) Group CPC: Complex Pregnancy Clinic	Social: Current or previous child protection(SMC) poor attender, family violence
GI: Inflammatory bowel disease (Crohn's or UC) Obstetric cholestasis (BS<40umol/L)	 Social: Current or previous child protection(SMC) poor attender, family violence ID: In this pregnancy: SARS-Cov-2, cytomegalovirus, parvovirus, HIV, rubella, toxoplasmosis, TB, varicella/zoster
GI:Inflammatory bowel disease (Crohn's or UC) Obstetric cholestasis (BS<40umol/L)	 Social: Current or previous child protection(SMC) poor attender, family violence ID: In this pregnancy: SARS-Cov-2, cytomegalovirus, parvovirus, HIV, rubella, toxoplasmosis, TB, varicella/zoster Neuro: AV malformation, epilepsy with seizure or

Women's Health **Risk Assessment for Model of Care** Summary of Risk Groups Gynaecological Indications

Group B: Medium Risk	
Cervical screening result needing follow up	Intrauterine contraceptive device in situ
Female Genital Mutilation	Miscarriage (threatened or multiple)
Fibroids	Pelvic bone deformities (trauma, congenital or acquired
Infertility treatment	with symptoms)
	Pelvic floor repair (see below)
Group C: Higher Risk	
Colposuspension or mesh following prolapse repair,	Myomectomy/hysterotomy, bicornuate
previous fistula	uterus/unicornuate uterus or other congenital uterine
Cone biopsy or LLETZx2	anomaly

Abbreviations

AOD	Alcohol and other drugs	GORD	Gastro-oesophogeal reflux disease
Anaes	Anaesthetic	Haem	Haematological
AREDF	Absent or reversed end-diastolc flow	ID	Infectious diseases
BMI	Body mass index	LLETZ	Large loop excision of the transformation zone
Card	Cardiac	MCDA	Monochorionic diamniotic
CF	Cystic Fibrosis	MSk	Musculoskeletal
CPR	Cerebral/Placental ratio	Neuro	Neurological
Derm	Dermatological	Pharm	Pharmacological
DCDA	Dichorionic diamniotic	PIH	Pregnancy induced hypertension
EFW	Estimate fetal weight	PMH	Perinatal Mental Health
Endo	Endocrinological	Psy	Psychiatric
EPDS	Edinburgh postnatal depression score	Resp	Respiratory
FGR	Fetal growth restriction	Rheum	Rheumatological
GBS	Group B Streptococcus	SMC	Special maternity clinic
GDM	Gestational diabetes mellitus	UA	Umbilical artery doppler
Gen	Genetic	UC	Ulcerative Colitis
GI	Gastrointestinal	YWC	Young Women's Clinic

Women's Health Risk Assessment for Model of Care Schedules of Care

Peninsula Health

Pregnancy Models of Care Recommended Schedule of Visits				
	Group A	Group A+	Group B	Group C /CPC
Week of Pregnancy	Low risk primary maternity care Suitable for - midwife care, GP shared care, private obstetrician, private midwife	Low risk maternity care with perinatal plan Suitable for - midwife care, GP shared care, private obstetrician, private midwife	Medium risk collaborative maternity care*. Suitable for – collaborative hospital obstetric and midwife care, specialty maternity clinic, young women's clinic, private obstetrician, hospital obstetric care	High risk specialist obstetric care* Suitable for – hospital obstetric care, complex pregnancy care, private obstetrician
6-10 weeks (confirmation of pregnancy early pregnancy screening)	GP / VMO	GP / VMO	GP /VMO	GP /VMO
10-14 weeks (Hospital booking initial model of care triage)	Midwife	Midwife	Midwife	Midwife
14-16 weeks (obstetric planning visit)	Hospital obstetric doctor, VMO	Hospital obstetric doctor, VMO	Hospital obstetric doctor, VMO (obstetric planning visit)	Hospital obstetric doctor, VMO (obstetric planning visit)
20-24 weeks (after morphology scan)	Midwife, VMO, Shared care GP	Midwife, VMO, Shared care GP	Hospital obstetric doctor, VMO	Hospital obstetric doctor, VMO
28 weeks (after OGTT, Gp antibodies, FBE, anti D administration)	Midwife, VMO, Shared care GP	Midwife, VMO, Shared care GP	Midwife, hospital obstetric doctor, VMO, shared care GP (women having growth scans require obstetric or VMO review)	Hospital obstetric doctor, VMO
32 Weeks	Midwife, VMO, Shared care GP	Midwife, VMO, Shared care GP	Hospital obstetric doctor, VMO	Hospital obstetric doctor, VMO
34 weeks Anti D administration	Midwife - birth planning and pregnancy education (may replace or be in addition to VMO or share care GP visit)	Hospital obstetric doctor, VMO – confirm birth plan. (Plus Midwife – pregnancy education if not already discussed)	Midwife -birth planning and pregnancy education (may replace or be in addition to hospital obstetric, VMO or shared care GP visit)	Midwife -birth planning and pregnancy education (in addition to hospital obstetric, VMO)
36 weeks	Midwife, VMO, Shared care GP	Midwife, VMO, Shared care GP	Hospital obstetric doctor, VMO	Hospital obstetric doctor, VMO
38 weeks	Midwife, VMO, Shared care GP	Midwife, VMO, Shared care GP	Midwife, hospital obstetric doctor, VMO, share care GP (women with risk factors for FGR require hospital obstetric or VMO review.	Hospital obstetric doctor, VMO
39 weeks	Midwife, VMO, Shared care GP	Midwife, VMO, Shared care GP	Midwife, hospital obstetric doctor, VMO, share care GP (women with risk factors for FGR require hospital obstetric or VMO review)	Hospital obstetric doctor, VMO
40 +/- 41 weeks* (post dates monitoring and induction of labour planning)	Midwife, VMO, hospital obstetric doctor	Midwife, VMO, hospital obstetric doctor	Hospital obstetric doctor, VMO	Hospital obstetric doctor, VMO

*schedule additional visits as required
